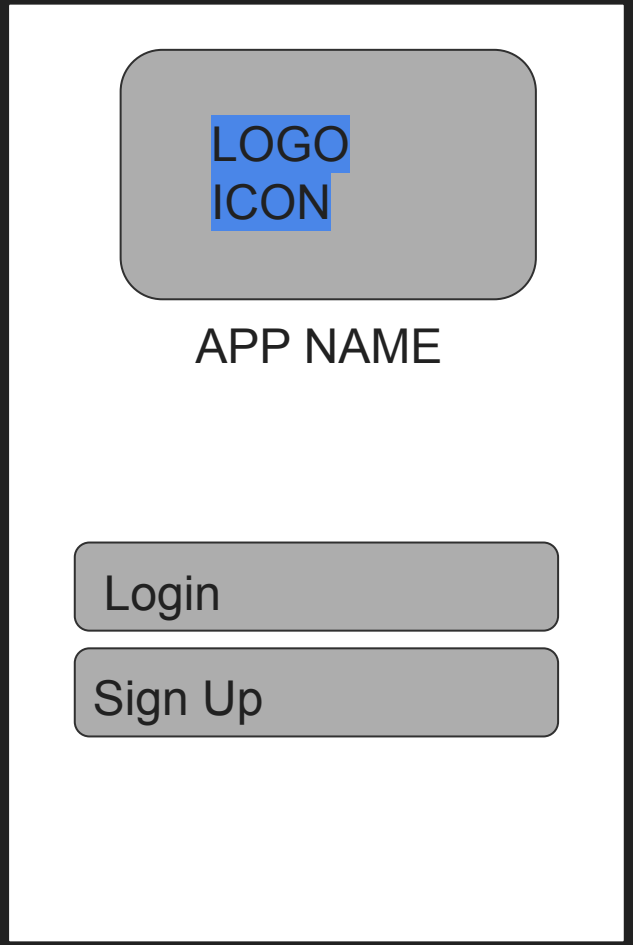
UI Elements
(General Edition)

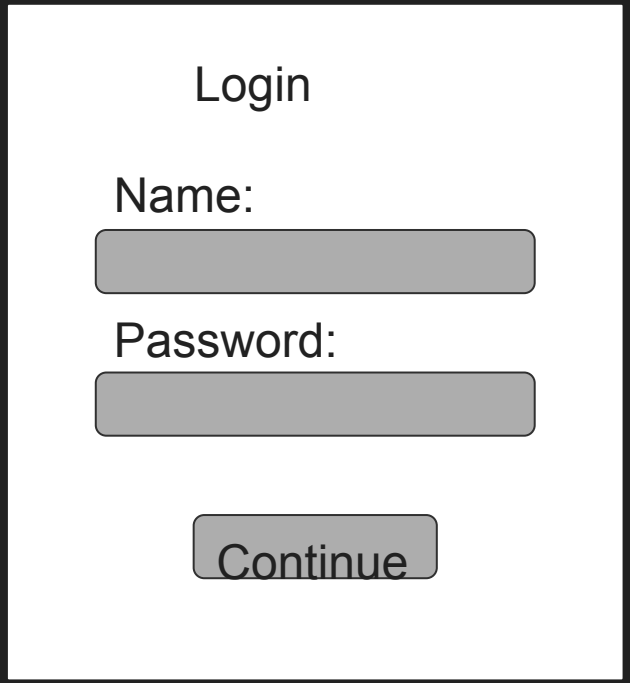
Login/SignUp/StartUp UI



Notes:

- **All types of users will see this screen when they first use the app**
- **Clicking Login or SignUp creates popup that requires user to fill in information to continue**

Login and Sign Up PopUp UI

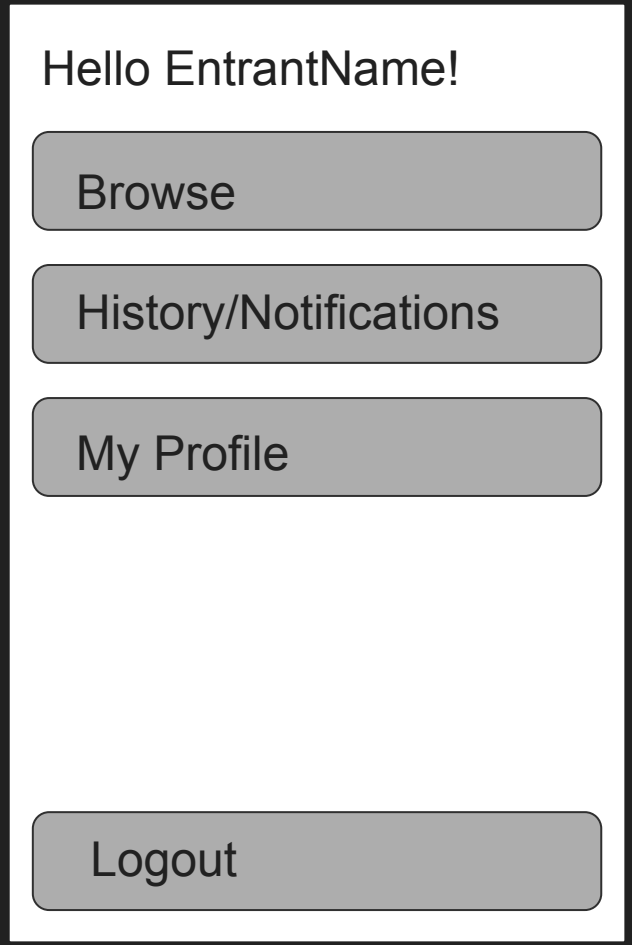


Notes:

Similar Looking screens because we are assuming that user does not need to give us all their information immediately

UI Elements
(Entrants Edition)

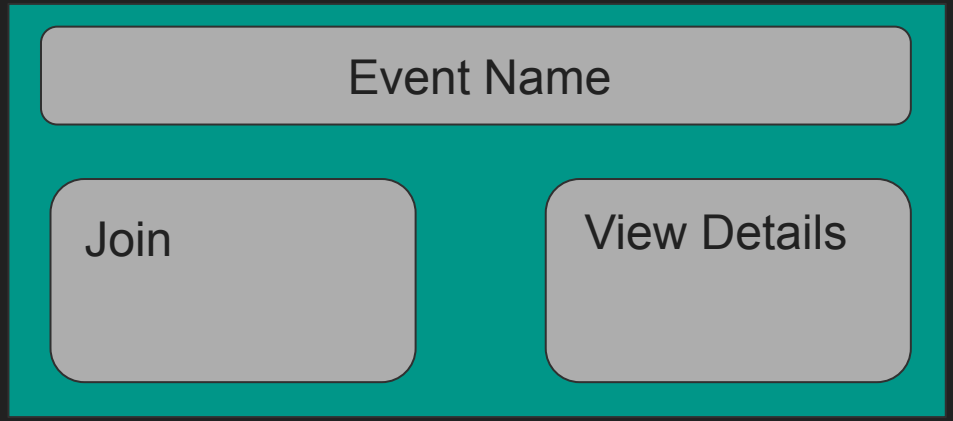
Home (Entrant Perspective)



Notes:

- **Purpose: Covers the main 3 features for Entrant**
- **Logout button is here because its not a required feature, but is needed to help testing**
- **Final product might use nav bar instead of array adapter since it would look better**

Event UI on Events List (Entrant Perspective)



=

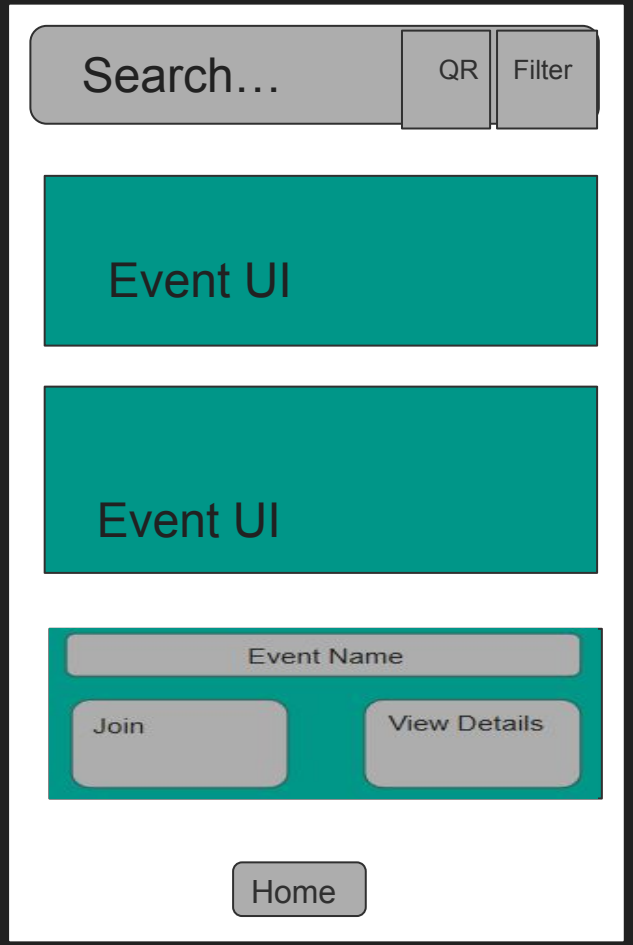
Event UI

Notes:

- **Purpose: shows what the event UI looks like on the browse screen → Not detailed on browse screen to allow more detail**

- **“View Details” creates popup (or fragment depending on final product)**

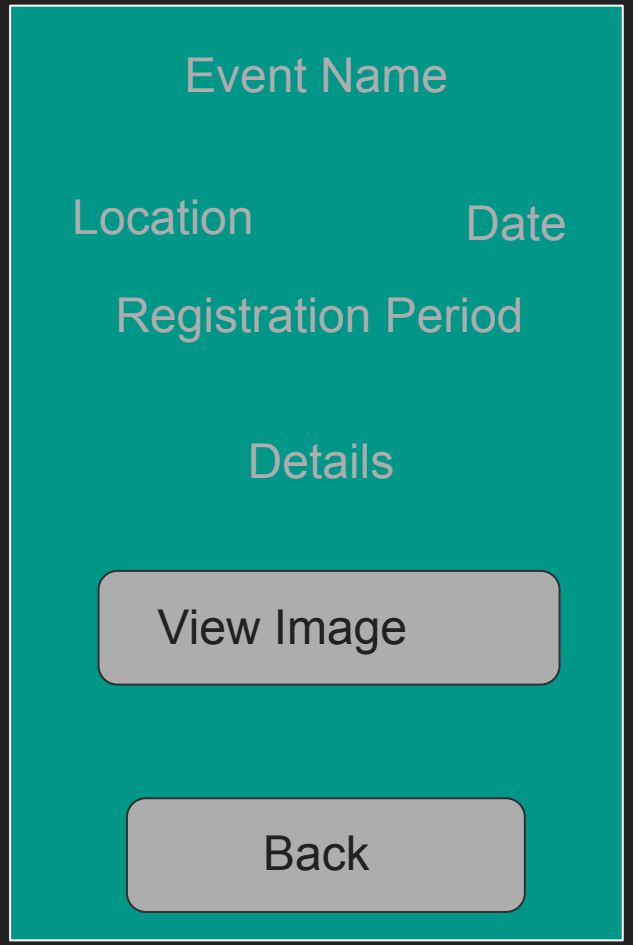
Browse (Entrant Perspective)



Notes:

- Purpose: search and filter for certain events → Without anything to search for it shows list of events
- Scrollable Events list
- Filter creates popup or is a drop down
- Qr is a popup
- When clicking Event UI it creates a pop up (or fragment → depends on final product)

Event Details (Entrant Perspective)

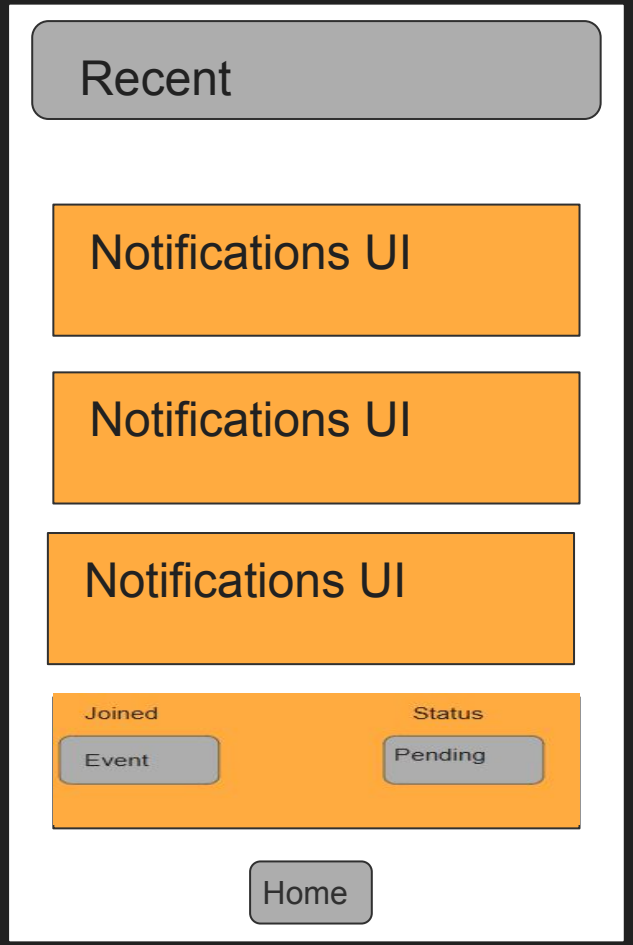


Notes:

- **Purpose: shows events details like time, date, etc after pressing view details on event UI**

- **View Image creates a popup that shows the image → Final product might just make the image part of the this screen → Make this screen scrollable**

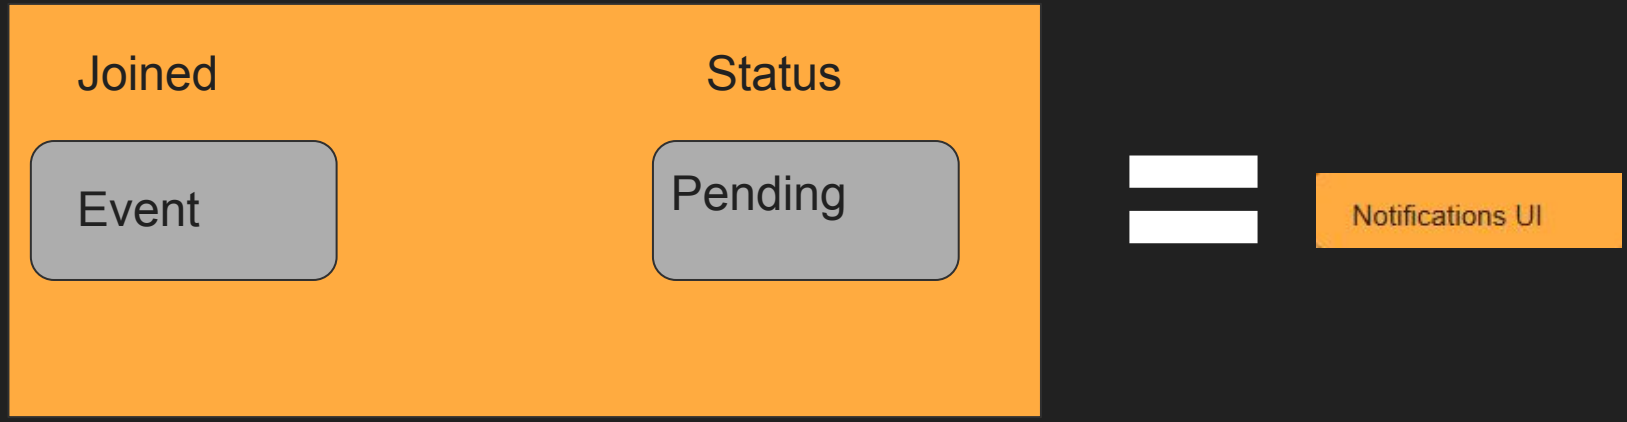
Notifications/History (Entrant Perspective)



Notes:

- **Purpose: Acts like Twitter Notification box for events that they joined and if they won or not**
- **Scrollable Notification List**
- **Clicking Notification UI creates a popup box that gives users more info or abilities**

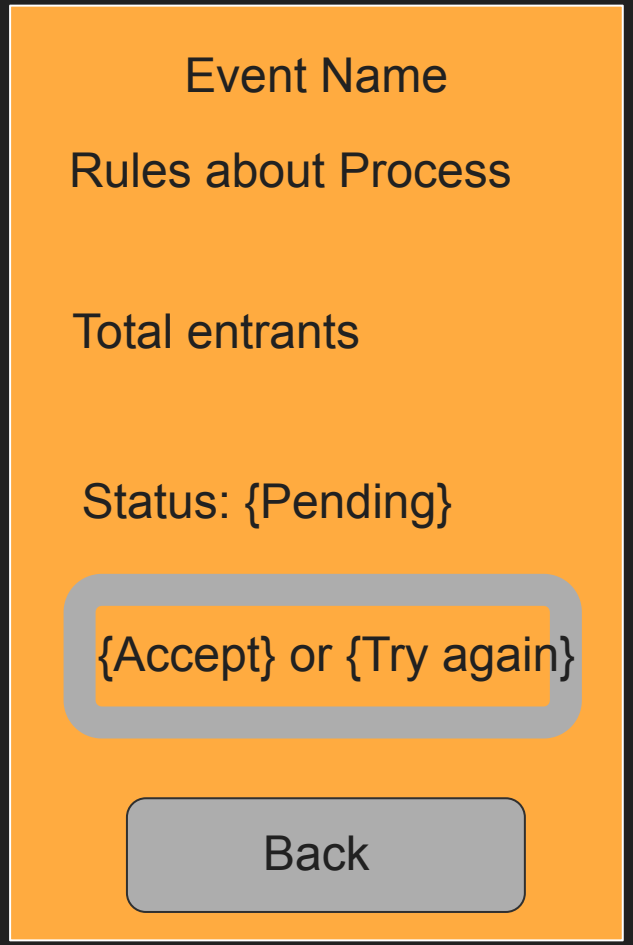
Notification UI on Notifications List (Entrant Perspective)



Notes:

- **Purpose: shows what the Notification UI looks like on the Notification/History screen → Not detailed on browse screen to allow more detail**
- **Clicking “Event” goes to Event Details popup (or fragment)**
- **Clicking “Pending” goes Notification Status screen**

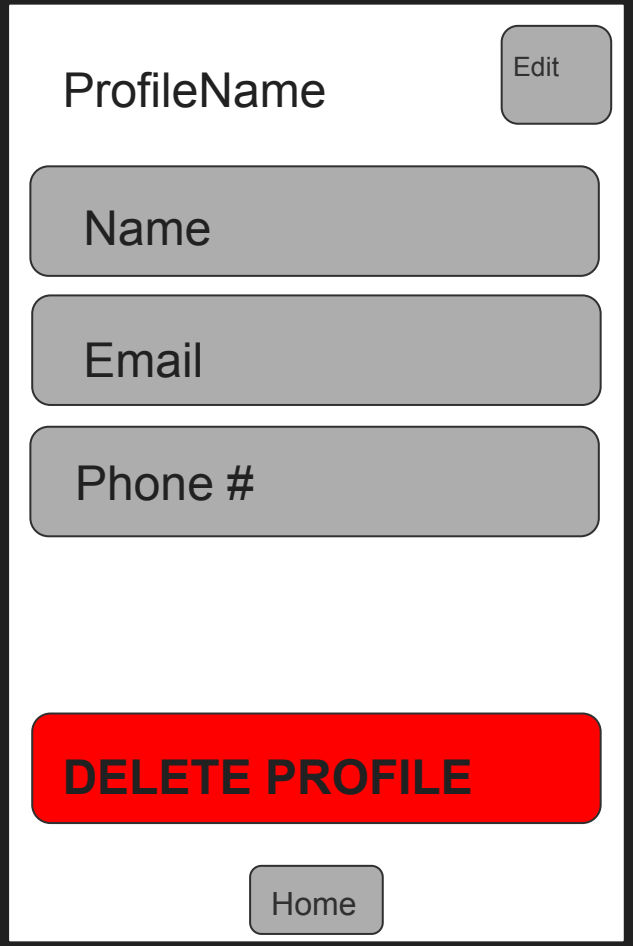
Notifications Status Popup (Entrant Perspective)



Notes:

- **Purpose: shows if the lottery has been drawn yet and if the user has won**
- **The “Accept or Try again” button changes its text to “Accept” or “Try again” depending on if the user has won or lost their invitation**
- **Status tells the user if the user won or not or if the lottery is still ongoing**

Profile (Entrant Perspective)



Notes:

- **Purpose: allows user to customize their profile info (except profile name → potential database problems)**
- **Edit button allows name, email, phone # to be editable**
- **Delete creates pop up to indicate if user is abs sure**

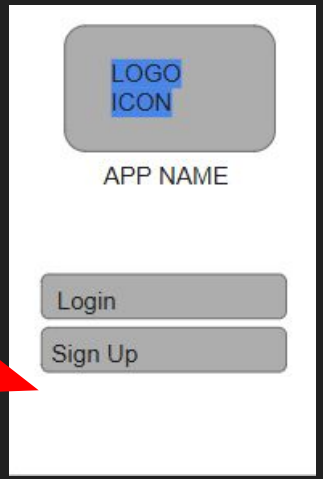
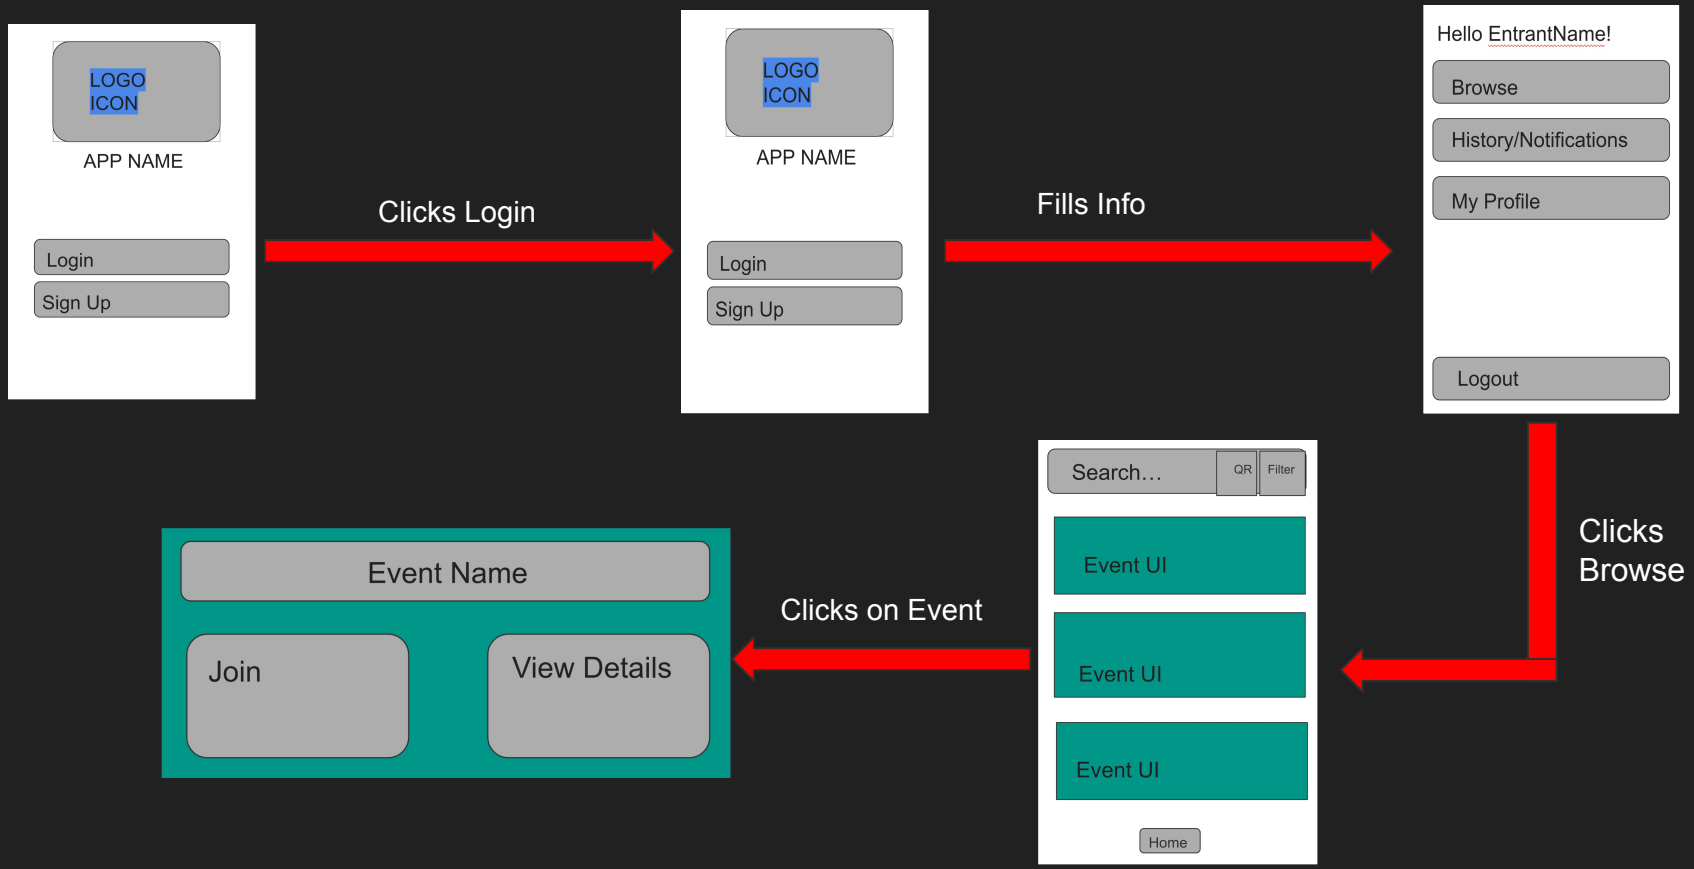
Options in My Profile (Not Home)

Clicking edit button allows Name, Email, Phone # to be editable

Deletes all info about user and sends back to start up

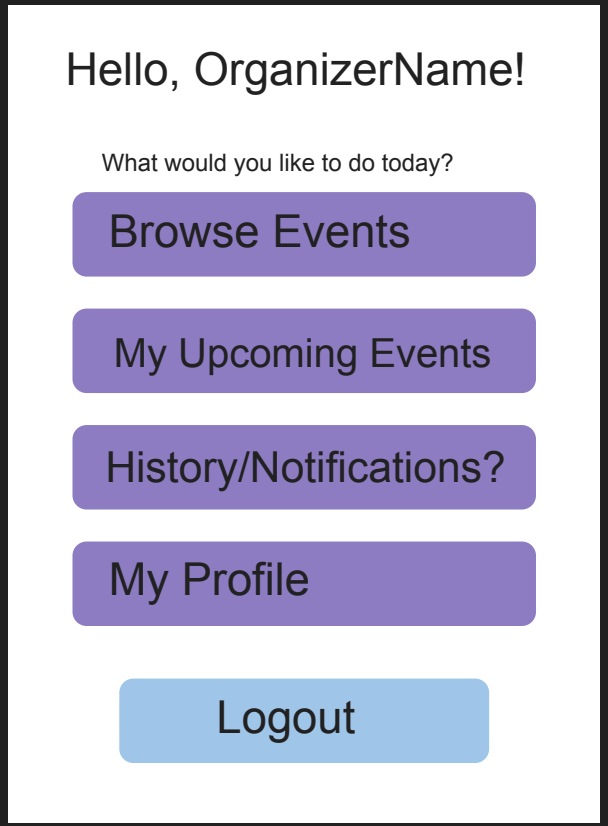


JOIN A WAITLIST FLOW



UI Elements
(Organizer Edition)

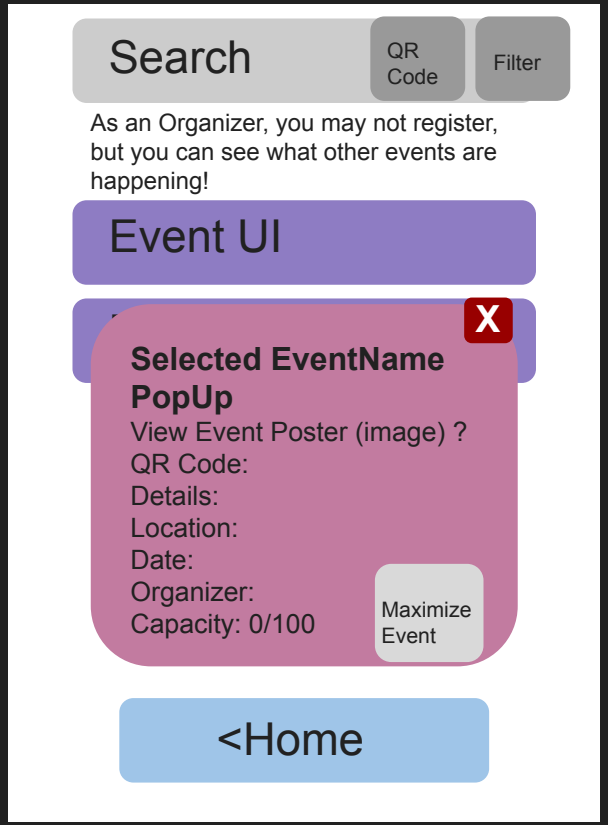
Home (Organizers Edition)



Notes:
Covers main elements for an organizer

- Browse
  - Organizers may want to see other competing events occurring in the same area or on same date as their own.
- My Events
  - Organizers view their upcoming events (+ the event's entrants details)
  - Create new/edit events
  - Send notifications to entrants
- History
  - See Past/Cancelled Events
  - See Past Sent Notifications
  - (Will organizers receive any notifications?? Notifications for every entrant register may be repetitive and annoying)
- My Profile
  - See/Edit personal Info
  - Delete Account/Logout

Browse? [Should an organizer be able to browse?] **(Organizers Edition)**



Notes:

Browse Fragment:

- Should be identical to entrant browser, but without sign up functionality.

- Organizers view other events, and can also see their event from an entrant perspective.
  - When viewing their own event in browser, should they have the ability to edit?? (I think no personally, maybe notice saying: This is your event! To edit, please find this event in your events tab)

- Event will appear as popUp with option to maximize to full screen.

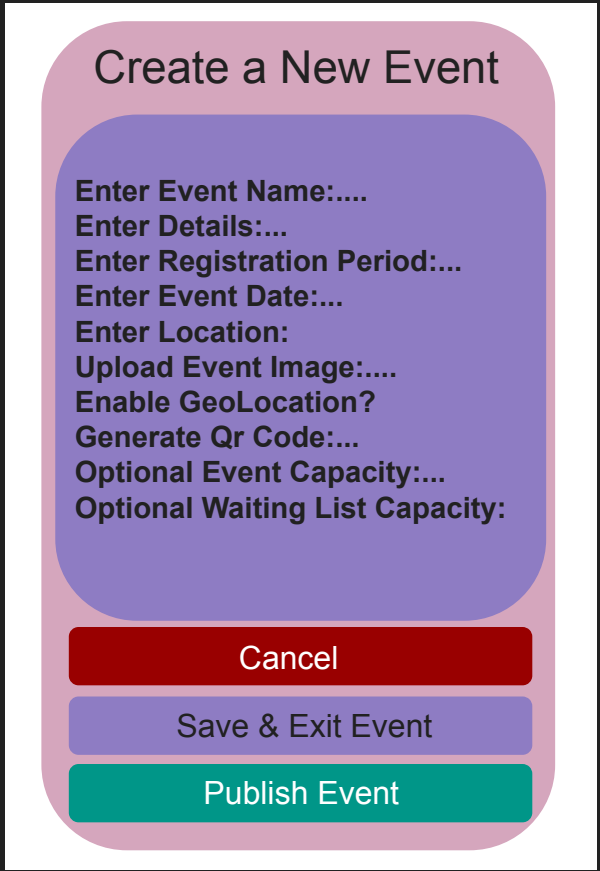
Upcoming Events List (Organizers Edition)

Notes:

My Upcoming Events Fragment:

- Basic Scrolling List of all of Organizer's upcoming events in
- Events can be selected to view/edit details
- New events can be created
-
- Existing event drafts can be found and edited
- Can navigate back to Home Page
    - Page is pretty basic + simple, missing anything obvious??

My Upcoming Events List-> Create New Event (Organizers Edition)

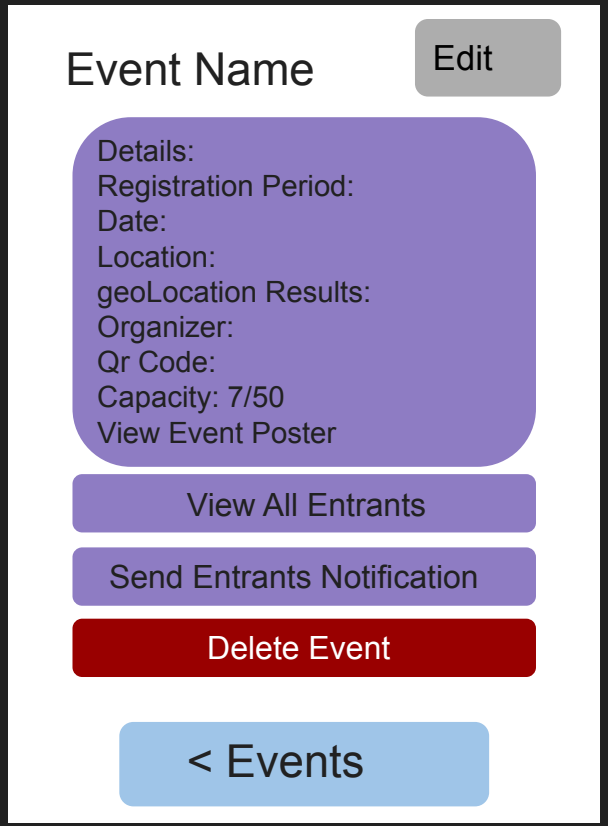


Notes:

My Upcoming Events Fragment-> Create New Event Fragment:

- Organizer enters details to create new event
    - Some must be mandatory: Name, Details/Description, Registration Period, Date, Location
    - Some optional: Event Capacity, Waiting List Capacity, Event Poster/Image (is this optional?), Geolocation (to see location map of entrants)
- Organizer can **(1)** publish/post event, **(2)** save draft and exit (to return later) or **(3)** cancel creation all together
    - Selection of any of these will return to my Events Fragment
    - If event was posted, new event should appear upon return to my Events right away.
- Should organizers be able to save + draft events?
- If so, where should they navigate to the Event

My Upcoming Events-> Select Event-> Event View (Organizers Edition)



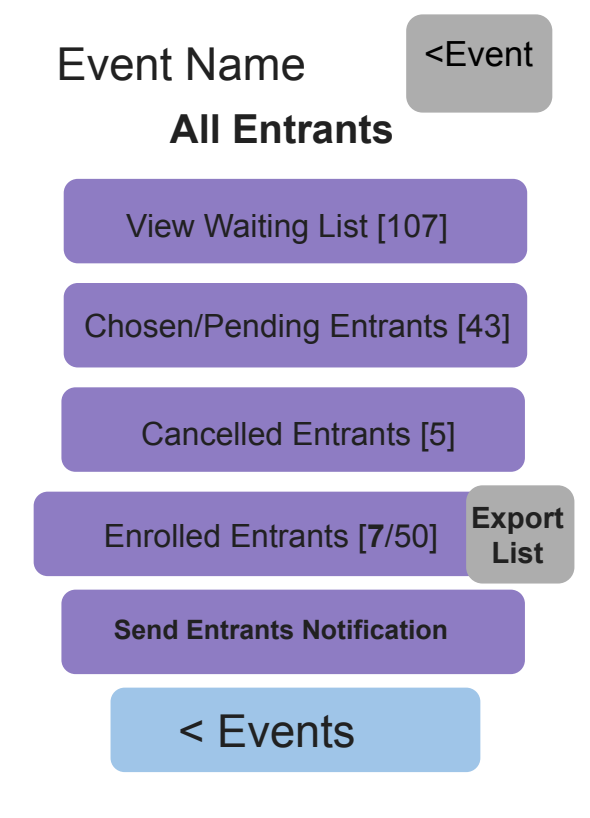
Notes:

My Upcoming Events Fragment-> Event View

- Organizers can see existing event details and edit
  - Can view Geolocation results (if it was enabled)
    - Should open up to a map of where all entrants registered from
  - Can view poster and QR code as popUp

- Organizers can navigate to a fragment with the list of all the categories of entrants
- Can send entrants a notification

My Upcoming Events-> Select Event-> Event View -> All Entrants (Organizers Edition)

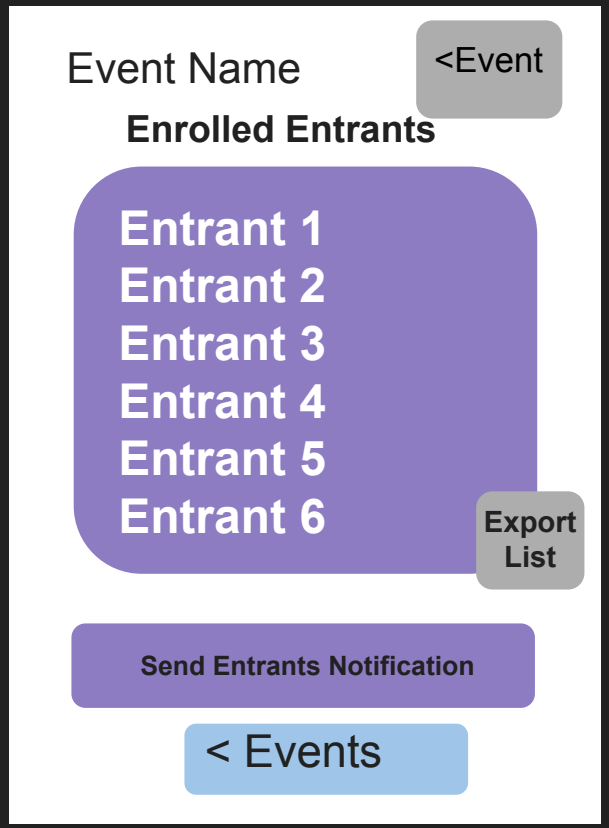


Notes:

My Upcoming Events Fragment-> Selected Event -> View All Entrants

- Organizers can select to see a list of all categories of entrants
  - Waiting List (Is this the pool where organizers should draw a replacement entrant if a chosen entrants cancels/rejects? **02.05.03**)
  - Chosen/Pending Entrants
  - Cancelled Entrants (Entrants who enrolled and then cancelled or rejected the invitation)
  - Enrolled Entrants
- Organizers can send entrants a notification from this fragment (and others)
- Organizers can export a list of all enrolled entrants
- Organizers can navigate back to selected events or all events

My Upcoming Events-> Select Event-> Event View -> All Entrants-> Enrolled Entrants (Organizers Edition)



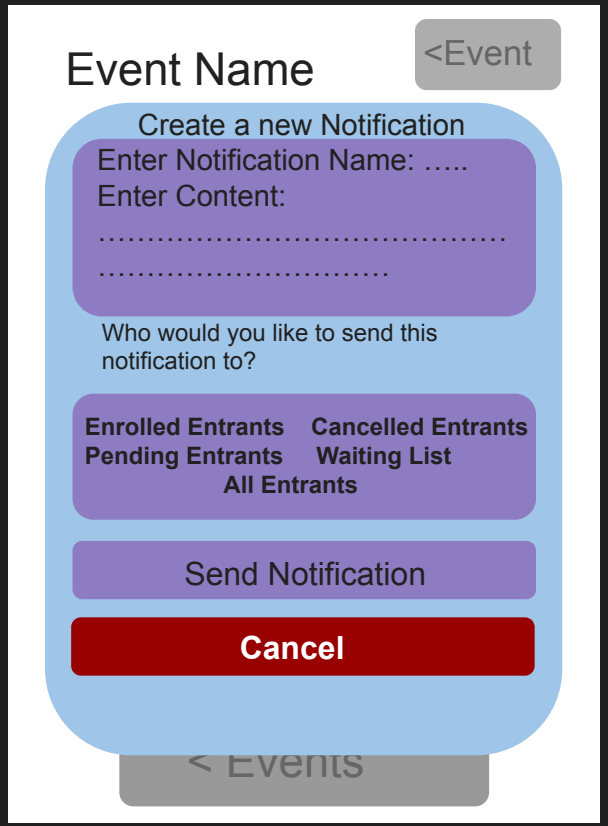
Notes:

My Events Fragment-> Selected Event -> View All Entrants-> Enrolled Entrants View

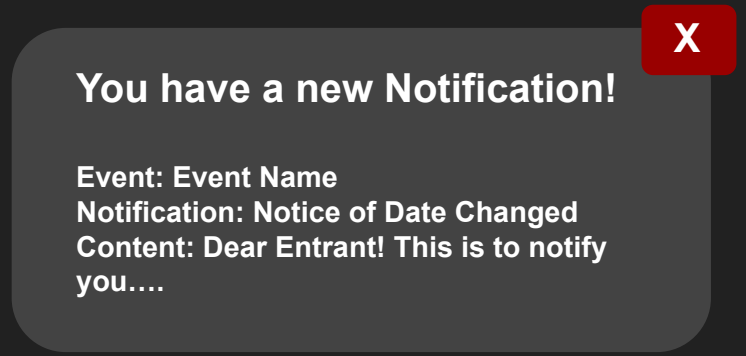
- Organizers see a list of all entrants of a category (Enrolled)
  - Other categories will look similar, with different features, Waiting List (have option to approve entrant), Chosen/Pending Entrants, Cancelled Entrants

  fragment (and others)
- Organizers can export a list of all enrolled entrants
- Organizer can select entrant and view their details
- Organizers can navigate back to selected event or all events

Creating/Sending Notification for Event View (Organizers Edition)



Generated Notification mockUp →

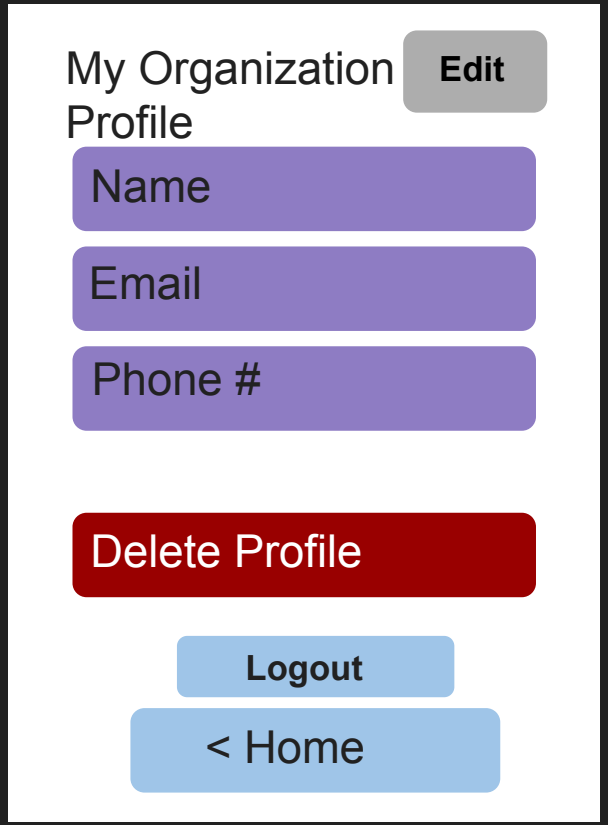


Notes: Creating Notification Fragment

- Organizer must enter notification name +Content
- Organizer can choose who receives the notification (one, multiple, or all categories of entrants)
- Organizer can cancel notification (and return to event)

-

Profile View (Organizers Edition)

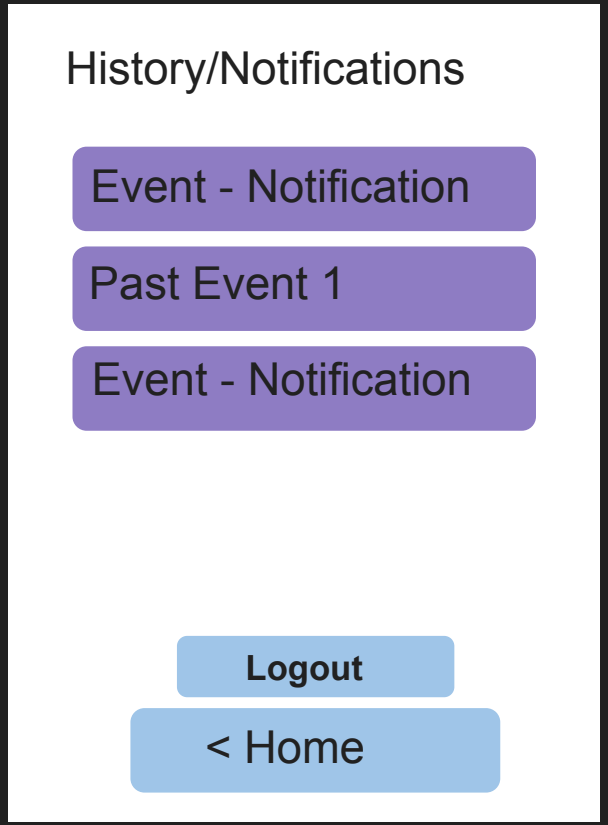


Notes:

My Profile Fragment:

- Organizer can view/edit their details
  - Some details should be mandatory (name, email, phone #)
  - Some not (location, etc)
- Organizer can permanently delete profile (and with it all their info from database)
- Organizer can return to main dashboard (or can logout from profile view? Is this unnecessary?)
- Potential Profile Details for future:
  - Organizer ID (unique handle, private), Organizer Name (for Event Display)

History / Notifications (Organizers Edition)



Notes:

- Completed Events / Sent Notifications under the Organization are listed in order of more recent -> oldest.
- Each item has a timestamp.
- Notifications have their host Event listed with them.

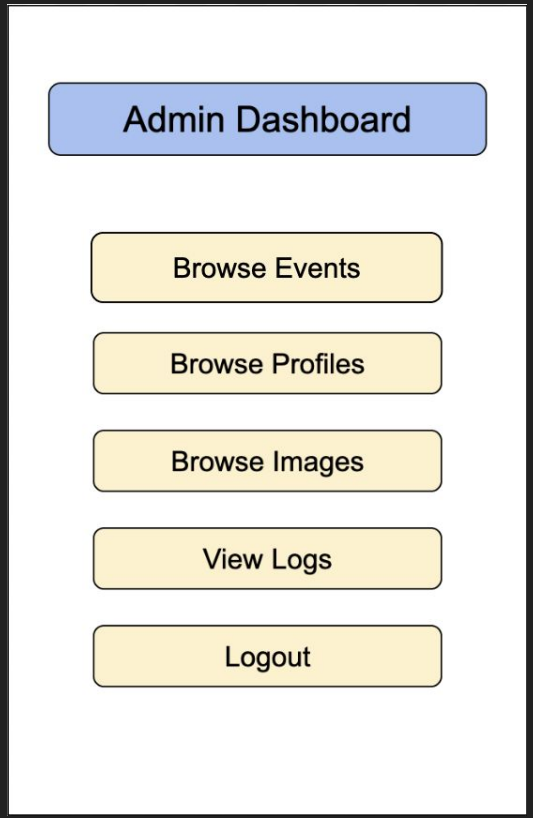
UI Elements
(Admin Edition)

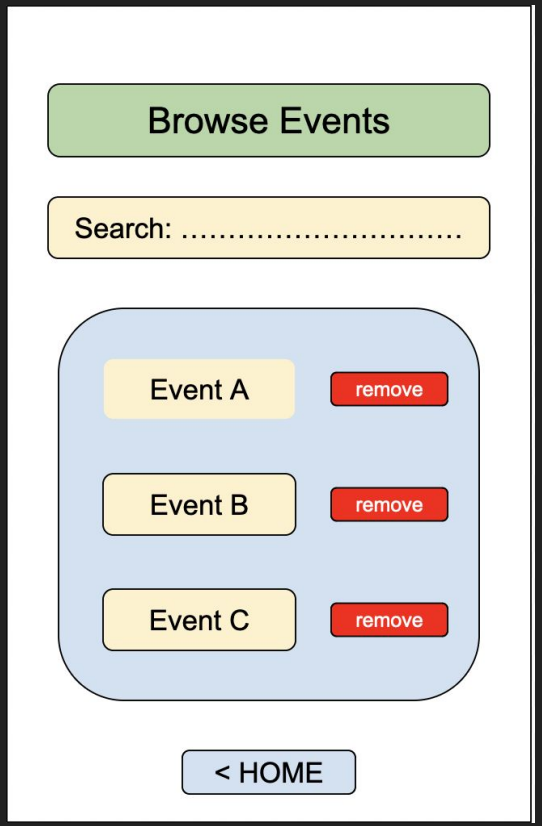
Admin Dashboard



Notes:

- Main hub for all admin actions and system management.
- Each button navigates to a specific management screen.
- Clean and simple interface designed for quick access.
- Logout option ensures account security after each session.
- Could include a quick summary panel (e.g., total users, events, images).
- Future updates can enable role-based permissions for admins.

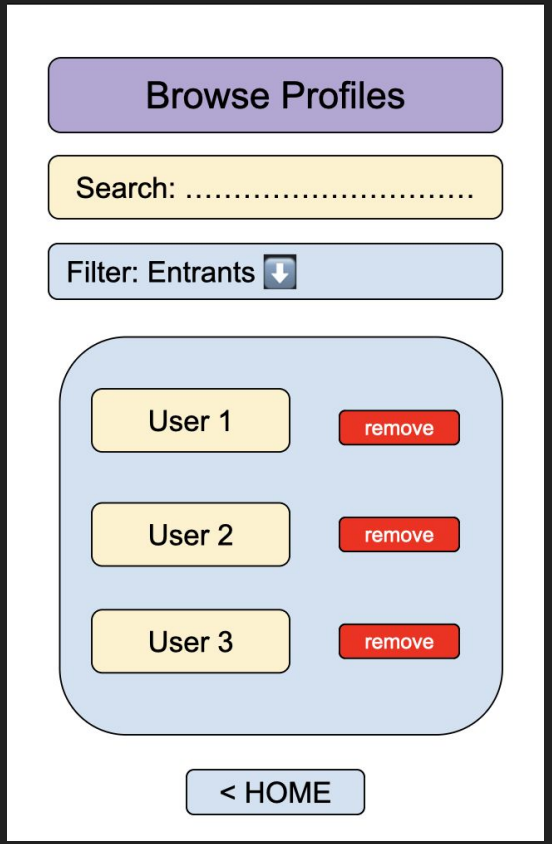
Browse Events



Notes:

- Displays a list of all available or active events.
- The “Remove” button allows deletion of selected events.
- Search bar enables quick lookup of events by name or date.
- Home button takes the admin back to the main dashboard.
- Can be expanded later to include event creation, editing, or sorting by date/type.
- Optional confirmation pop-up before deletion can prevent accidental removals.

Browse Profiles

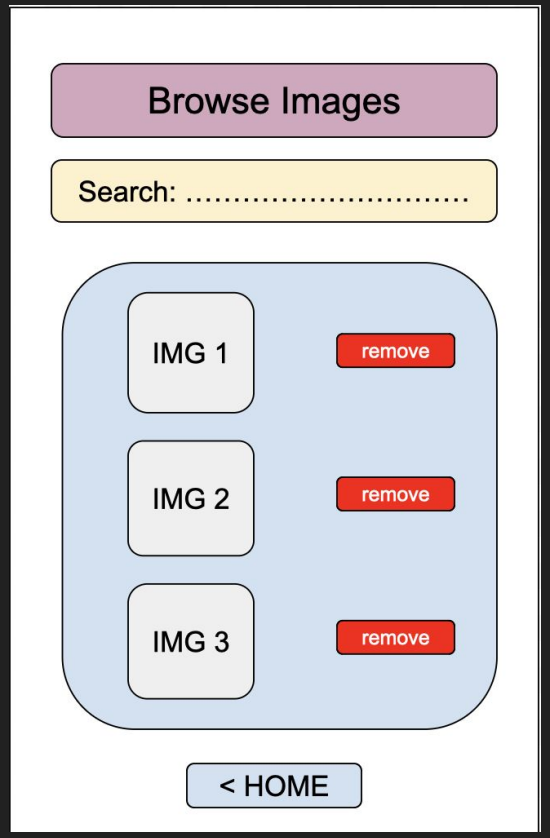


Browse Profiles

Notes:

- Displays a list of user profiles within the system.
- Search and filter functions make it easy to locate users quickly.
- “Remove” button allows admin to deactivate or delete a user.
- Home button returns admin to the main dashboard.
- Could include profile details like role, status, or activity level.
- Future improvement: add “View Profile” or “Edit Profile” options for deeper user management.

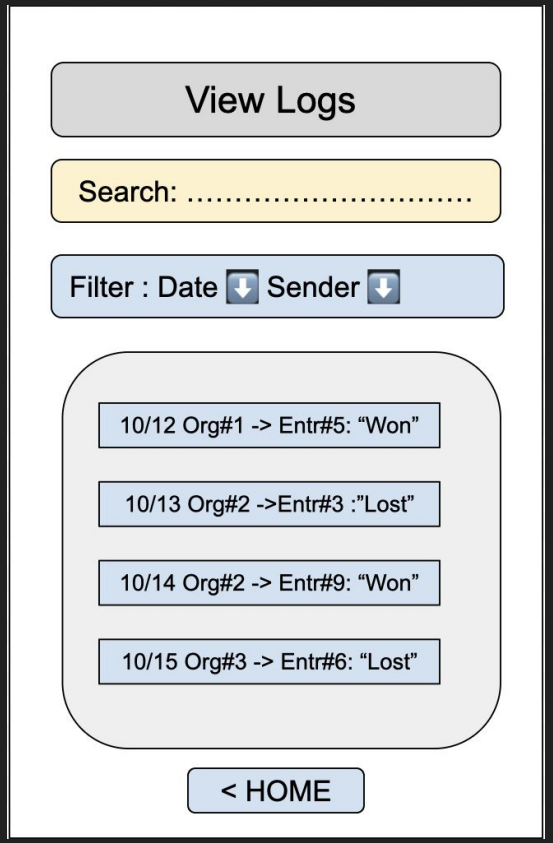
Browse Images



Notes:

- Shows uploaded or stored images related to events or users.
- Admin can search by filename, uploader, or date.
- “Remove” button deletes unwanted or inappropriate content.
- Home button brings admin back to the dashboard.
- Can be expanded later to include image preview, download, or bulk removal features.
- Could show image metadata (upload date, uploader, size).

View Logs

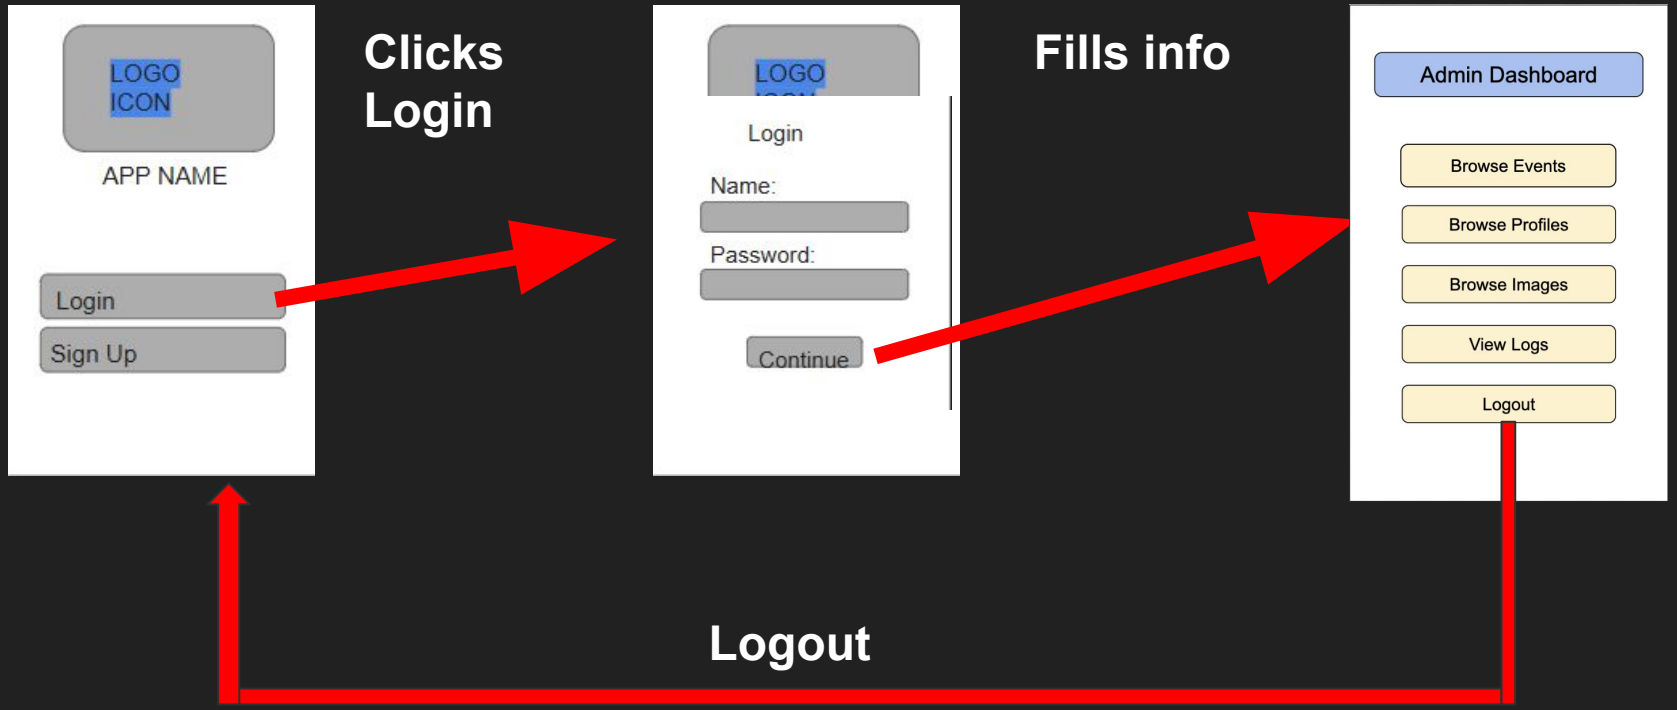


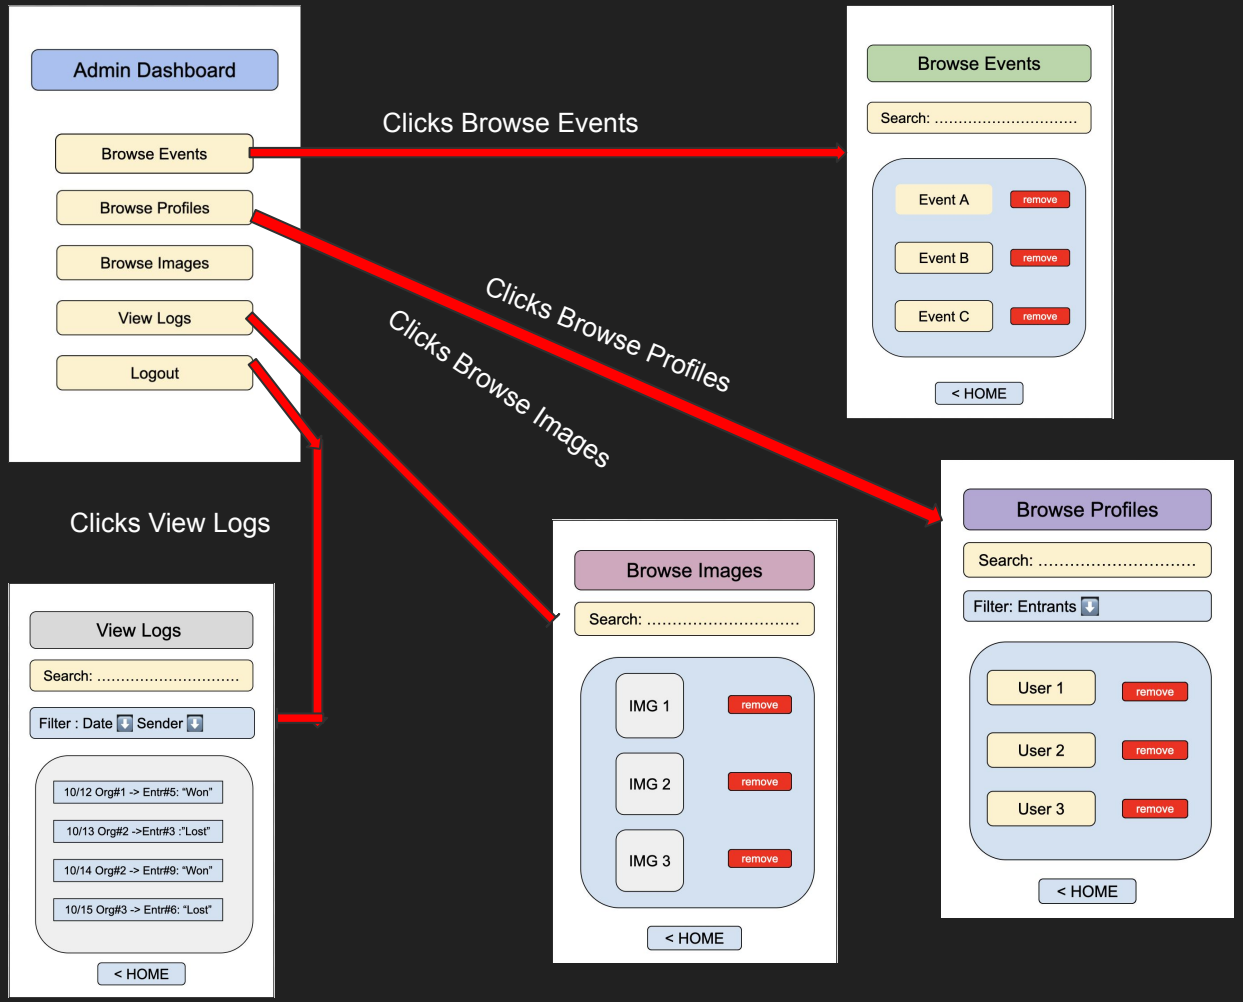
Notes:

- Displays activity and event logs for system tracking.
- Search and filter by date or sender make log review efficient.
- Read-only interface — admins cannot modify log entries.
- Home button returns to the main dashboard.
- Useful for monitoring performance, tracking issues, and verifying notifications sent.
- Could later support exporting logs or filtering by log type (error, info, alert).

Storyboard Sequence
(Admin Edition)

Logging in (Admin Edition)





Admin Screen Flow

The **Admin Dashboard** serves as the main hub for all management tasks — events, profiles, images, and logs. Each button opens a specific screen while the **Home** button always returns the admin to the dashboard.

- **Browse Events:** View all active events, search by name or date, and remove as needed. Can later support editing, sorting, and event creation.
- **Browse Profiles:** Manage user profiles with search and filter tools. Allows user removal; future updates may include view/edit options and role details.
- **Browse Images:** Access and manage uploaded images. Supports search and removal; can be expanded for previews, metadata, and bulk actions.
- **View Logs:** Displays system activity with search and filter by date or sender. Read-only for auditing; can later support export and log-type filtering.
- **Logout:** Ensures secure session termination after admin tasks.
